4     "email": [
5       "The email has already been taken."
6     ]
7   }
8 }
```

Fixing 422 Unprocessab...

The most recent request failed - help me fix it. The response code was 422 and the response status was Unprocessable Content.

/api/register and the 422 error is:

"The email has already been taken."

The email firsir@example.com is already registered in your system. To fix this, I'll update the request body to use a different, unique email address.

The screenshot displays the Postman application interface. On the left, the 'COLLECTIONS' sidebar shows a tree structure with 'KU Money API' and 'laravel-api-app'. The 'laravel-api-app' collection is expanded, showing several 'POST New Request' items. The main workspace is titled 'laravel-api-app > New Request'. It shows a POST request to 'http://localhost:8000/api/posts' with a 'Bearer Token' authorization header. The 'Body' tab is selected, showing a JSON response with a 201 status code. The response body contains a JSON object with fields like 'id', 'title', 'body', 'user', 'created_at', and 'updated_at'. On the right, a panel titled 'Fixing 422 Unprocessab...' displays a message about a 422 error, stating 'The email firsir@example.com is already registered in your system. To fix this, I'll update the request body to use a different, unique email address.'
